PROFESSIONAL SUMMARY

AI Engineer with a strong foundation in full-stack development, specializing in building LLM-powered applications and Retrieval-Augmented Generation (RAG) systems. Experienced in developing intelligent search systems, agent-based workflows, and end-to-end AI applications using LangChain, vector databases, and modern LLM APIs.

EDUCATION

National University of Sciences and Technology (NUST), Islamabad *Expected May 2026*

- Bachelors in Electrical Engineering
- Bachelors in Computer Science (minor)

PROJECTS

AI-Powered Social Media Assistant (Final Year Project) (Github Link)

Tech Stack: Typescript, LLM APIs, Prompt Engineering, RAG, Full-Stack (React/Next.js), Postgresql, TailwindCSS, Meta APIs

- Developed an end-to-end AI system for automated content generation, scheduling, and publishing across social media platforms
- Built LLM-powered content generation pipeline tailored to user preferences and category-specific knowledge
- Applied prompt engineering techniques to fine-tune output quality and domain relevance
- Integrated automated publishing workflows for platforms like Instagram and Facebook, including scheduling functionality
- Implemented analytics tracking (likes, comments, engagement) to monitor content performance

Hybrid RAG Search System (Github Link)

Tech Stack: *Python, LangChain, RAG, Pinecone, Groq API, Huggingface, streamlit*

- Built a retrieval system combining semantic (dense) and keyword-based (sparse) search using Pinecone
- Developed complete RAG pipeline including document chunking, embeddings, and top-k retrieval tuning
- Enabled hybrid weighting between semantic and keyword search for improved accuracy
- Built interactive UI using Streamlit

Agent-Based Search Engine (Github Link)

Tech Stack*: Python, LangChain, LLM APIs, tools, streamlit, Wikipedia, Arxiv*

- Developed an intelligent system where agents dynamically select and use tools based on query intent
- Implemented multi-step reasoning workflows for retrieval and processing
- Integrated multiple tools to improve response flexibility and accuracy

WORK EXPERIENCE

Full-stack Developer | InLights (Part-time) *July 2025 – Dec 2025*

- Developed and maintained production-level web applications using React and Next.js
- Built scalable and responsive user interfaces with focus on performance
- Transitioned into AI development:
  -- Built RAG-based systems using Pinecone
  -- Developed agent-based AI search systems
  -- Created LLM-powered applications for summarization and retrieval
- Worked with LangChain, vector databases, and modern LLM APIs

SKILLS SUMMARY

AI / ML: LangChain, RAG, LLMs, Prompt Engineering, Agents, NLP, huggingface, streamlit, Tensorflow(keras), Scikitlearn

Vector Databases: Pinecone, Astradb, Chromadb, FAISS

Programming: Python, JavaScript

Web: React, Next.js, Tailwind CSS, Vercel, Git, Github
